'BERMUDA HIGH' IS RESPONSIBLE FOR WORST HEAT WAVE IN YEARS

Scientific Sharps in Washington Give Explanation of the Causes That Lead to Almost Unprecedented Conditions.

DESTRUCTION OF FOOD CROPS IS THREATENED

Entire Country From Atlantic Seaboard to Rocky Mountains Is Affected and No Promise of Relief Held Out.

Washington, July 27.—A "Bermuda high" is the official cause of the worst heat wave that has enveloped the country in fifteen years. Translated from the cryptic language of the weather sharps, that means a great area of high pressure subsiding on the weather drill grounds in the Atlantic off Bermuda for the last month, and now has let go the full power of its offensive from the seaboard to the Rocky mountains.

For weeks it has stood like a solid wall against the winds, trying vainly to move out of the interior over the ocean and now it is rapidly spreading along it, gathering heat and moisture from the tropics and sweeping them northward over the continent into the vacuum of so-called "low pressure areas." Although its intensity has not yet struck the Pacific coast, it is expected to do so within the next few days.

No relief is promised from the phenomena which the forecasters call "Bermuda high." It is a weather phenomenon which is not a new one, but it is a new one in its intensity and in its duration. It is a weather phenomenon which is not a new one, but it is a new one in its intensity and in its duration.
